GOVERNMENT DUTY (1849) £72,241. 15s. FARMING STOCK INSURED £9,722,490.

By the constitution of this Society, three-fifths of the surplus Premiums are allotted to the Assured, who have thus received, from time to time, returns amounting in the aggregate to nearly £350,000; while at the same time they are free from all responsibility on account of its engagements.

The last return was declared at Michaelmas 1846.

The Premiums charged by this Office are upon the most moderate scale, and in no case higher than those required by other Offices making no return to their Insurers.

The return is made upon all Policies, whether annual or for shorter periods.

This Society has been established upwards of forty years upon the principles of Mutual Assurance, during which period it has paid to claimants, on terminated Policies, upwards of £3,000,000, in addition to which nearly One Million sterling has been assigned by way of Bonuses. The invested capital of this Society amounted upon the 30th of June last to £2,120,000. 12s. 8d., and consisted of the general capital account £1,945,675, and the reserved fund of £174,324. 13s. 6d.

The annual income, according to the balance-sheet then audited, amounted to £257,482. 2s. 11d., of which £162,671. 4s. 4d. was received on account of Annual Premiums dependent upon 6892 lives.

There is no proprietary to divide with the assured the profits of this Institution, which are therefore periodically assigned in addition made to the sums assured on all Policies for the whole duration of life, in proportion to the amount of Premium paid.

The attention of the Public is called to the magnitude of the reserved fund, in itself larger than the subscribed capital of most Insurance Offices, and which, instead of proving a source of exhaustion, as the subscribed capital of a proprietary body must necessarily be, must in this Society become the parent of future Bonuses. From the 30th June 1849, to the same date 1850, 521 new Policies were taken out, being an increase of 51 upon the year; a number strongly demonstrating the public confidence in this Society.

One-half of the first five Annual Premiums may remain as a permanent charge upon Policies granted for the whole duration of life.

For Prospectuses of both Societies apply to the Offices, 6, Crescent, New Bridge-street, Blackfriars, and 26, Birchin-lane, London; and Surrey-street, Norwich.

THE
JOURNAL OF DESIGN AND MANUFACTURES,

CONTAINING

Actual Fabric Patterns and Engravings.

THE JOURNAL OF DESIGN AND MANUFACTURES is addressed to the PRODUCERS and CONSUMERS of all DECORATIVE MANUFACTURES, as well the MERCHANT, the MANUFACTURER, the DESIGNER, the ART WORKMAN, as the GENERAL PUBLIC.

The JOURNAL of DESIGN and MANUFACTURES advocates—

The Recognition of Sound Principles of Design, and the Necessity for a Faith in them.

The Application of these Principles to Manufactures and Purposes of Utility.

The Progress of Design in accordance with the Wants and Sentiments of the Present Age rather than a Slavish Repetition of the Ancient or Mediæval Art of Past Ages.

The Improvement of the Laws regulating Copyright of Design and the Extension of the Period of Copyright.

The Diffusion of Art-Education through all Classes, and the Increased Efficiency of Schools of Design—And

The Establishment of Public Exhibitions of Decorative Manufactures.

Four Volumes of the JOURNAL OF DESIGN AND MANUFACTURES are now completed, price 7s. 6d. each, bound. During their progress, the effect and soundness of the principles advocated in them have been signally shown in the extension of Copyright of Design, in the amendment of the Schools of Design, in the general improvement of Decorative Manufactures; but, above all, in the success of the Great Exhibition of the Works of Industry of all Nations, which the JOURNAL OF DESIGN AND MANUFACTURES consistently supported as a theory, long before it became a great fact.

THE JOURNAL OF DESIGN AND MANUFACTURES is the only publication in Europe which inserts in its pages SPECIMENS OF ACTUAL FABRICS.

DURING THE EXHIBITION the *Journal of Design and Manufactures* will insert SPECIMENS of the finest woven fabrics, &c., exhibited.

ATKINSON & CO.'S

FURNISHING WAREHOUSES AND CABINET MANUFACTORY,

70, 71, 72, 73, 74, & 75, Westminster Bridge Road. Lambeth, Sept. 1851.

MESSRS. ATKINSON & Co., having completed the very extensive alterations and additions to their Premises, which their increased business had rendered indispensable, respectfully invite their Customers to honour them by inspecting the newly arranged Warehouses and Show Rooms, and the magnificent and varied assortment of Goods with which they are stocked. The great object of the recent improvement has been so to economize space, that, notwithstanding the great extent of the Premises, the Purchaser may, with the least possible fatigue, and in the shortest time, inspect and select from the various departments such articles as may be required. With this view, the centre is devoted exclusively to the display of **Cabinet Furniture and Upholstery**, of which it will be found to contain as comprehensive a Stock as can possibly be desired; the left wing is appropriated to **Carpets, Rugs, Floor-cloths, Matting, &c. &c.**; and the right wing to **Curtains, Table-cloths, Bed-Linen, Blankets, and General Drapery**. Thus the Purchaser, without leaving the Premises, and under a system of arrangement which much facilitates a judicious selection, is enabled to choose every article requisite for Furnishing and Housekeeping. **MESSRS. ATKINSON & Co.** beg to assure Ladies and Gentlemen who are about to make purchases (and they appeal with confidence to those who have honoured them with their patronage to support the assurance) that every article sold by them is of the very best make and materials; and that the very high reputation for cheapness and manufacture they have so long maintained will be still supported, by supplying the best and most substantial articles at the lowest prices for which they can be manufactured. [418]

GLENFIELD STARCH.—The Ladies are respectfully requested to make a trial of the **GLENFIELD PATENT DOUBLE-REFINED POWDER STARCH**, which for Domestic use now stands UNRIVALLED. A NEW CHAPTER ON POISONS,

Household Surgery;

OR, HINTS ON EMERGENCIES.

With many Additional Hints.

By JOHN F. SOUTH, Surgeon to St. Thomas's Hospital.

Extract from Preface to the Third Edition.

It having been suggested that it would be advantageous in a little book, now on most folks' table, to add some hints of what should be done when poison has been accidentally or purposely taken, and the prompt determination and counteraction of which is of the first importance, I prevailed on my friend Dr. Gladstone to furnish me with a short notice of the more common poisons, and the mode in which they may be managed forthwith, in the absence or during the delayed attendance of a doctor of either of the three denominations; and he has executed his task with much ability and plainness, so that the most simple person may easily follow out his directions.

Price 13s. cloth, or in Twelve Shilling Parts,

THE ROYAL PHRASEOLOGICAL French-English & English-French Dictionary.

By J. C. TARVER, French Master, Eton College.

"Most readily do we acknowledge the flood of light which has been thrown on French phrases by M. Tarver. . . . His work is really a valuable addition to our Dictionary shelf—the most important shelf in every man's library. The nice skill with which he has compared and contrasted the phrases of the two most influential of modern tongues can hardly be over-praised."—*Quarterly Review*, September, 1860.

J. & J. COLMAN,

MANUFACTURERS OF

MUSTARD, STARCH, BLUES, AND BRITISH GUM,

9, COLLEGE HILL, UPPER THAMES STREET,

LONDON.

MUSTARD.—J. & J. COLMAN invite the attention of English and Foreign Merchants, and traders in general to the qualities of their Mustard, (manufactured from the best description of English Brown Seed,) and in so doing would observe that they have invariably directed their energies to the production of an article *warranted genuine in its character*, and which should combine the strength and pungency of the Seed with a certain pleasantness of flavour, whereby to render it one of the most agreeable of condiments—and it having ever been a source of complaint that Mustard when sent to Foreign Countries has, by the influence of climate and other causes, been considerably deteriorated, and at times so far damaged as to render it unfit for use, J. & J. COLMAN beg to announce that their **DOUBLE SUPERFINE** quality has stood the severest tests of climate and every contingency of transit; they have, therefore, the utmost confidence in recommending it for Foreign and Colonial supply as well as for Home Consumption. It is packed in bottles of 1 lb. and $\frac{1}{2}$ lb. of the largest sizes, for Foreign Markets.

In addition to the above, J. & J. COLMAN manufacture the three following kinds of Mustard, viz.—**SUPERFINE, FINE, and SECONDS**, which qualities are warranted good, and will be found available for general purposes. These kinds are packed either in casks, tins, or jars, as well as in the usual sized bottles.

STARCH has been for a considerable time offered to the Public in qualities so various and dissimilar, that it has been found difficult to determine what to purchase, in order to secure at a low price an article of uniform good quality, which can be prepared by ladies and laundresses with the least possible trouble—and it having been discovered from experience that **RICE STARCH** is more to be depended upon in its application than any other, J. & J. COLMAN have devoted their best attention to the subject, and spared neither pains nor expense to bring the article to perfection. They have much pleasure to inform the trade that they have secured by Letters Patent a process for manufacturing a **No. 1 PATENT RICE STARCH**, and **SATIN GLAZE RICE STARCH**, of a quality superior to every other made from Rice, being quite free from all mucilaginous matter. It is **SOLUBLE**, and can be used with greater ease and facility than the common Starch. Sold in packets of 5 lb., 1 lb., $\frac{1}{2}$ lb., and $\frac{1}{4}$ lb. each.

Ladies are especially invited to test the above SATIN GLAZE RICE STARCH. Being used in a fluid state it imparts an equality of stiffness and gloss to the finer fabrics, and produces a finish unequalled by any other yet offered.

As many persons, however, may still prefer the Wheaten Starches, J. & J. COLMAN continue to manufacture with the same care and attention their usual kinds, viz.—No. 1. London Starch. Patent White Starch. Soluble Satin Glaze Starch.

BLUE.—This article is manufactured of various shades of colour from Indigo and Prussian Blue, the former being used principally for Laundress purposes, the latter by the Manufacturers of Flannels, &c., &c., and when made genuine, they impart a colour which cannot be obtained from other ingredients. J. & J. COLMAN warrant the genuineness of their Blues, and the trade are respectfully invited to purchase them.

BRITISH GUM and **GUM SUBSTITUTE**, used by Silk and Calico Printers, in every variety of shade and colour, need only to be tried to insure satisfaction.

N. B.—The attention of English and Foreign Merchants, and the Trade in general is specially directed to the above articles, and all orders, addressed as above, will meet with prompt attention.

EXTRACT FROM "THE TIMES."

"COMMENCING with the miscellaneous specimens contributed by various manufacturers, we then find last, though not least, a striking group from the Cyclops Works, the property of Messrs. JOHNSON, CAMMELL, & Co., comprising specimens of files and rasps from 1 to 46 inches long (some of them very remarkable in form, manufactured specially for use in the national dockyards), iron and steel suitable for engineering, tool-making, &c.; specimens of locomotive engine and tender, railway-carriage, horse-box, buffer and other springs, &c. Together with these specimens is displayed a large and beautifully executed model of the Cyclops Works, accurately representing all the ramifications of that extensive establishment. To this house is devoted not only a large portion of space at the end of the western wall and the counter beneath, but also the wall space at right angles with it as far as it extends. The name and address

of the firm, together with the arms of royalty, are conspicuously blazoned, so as to attract the eye of visitors perambulating the principal avenue and the galleries in various directions. The large display of files in the compartment of Messrs. JOHNSON, CAMMELL, & Co. call for particular notice, inasmuch as, though of first-rate quality, they have not been made for exhibition, but taken from the ordinary stock. Of the larger descriptions of files it is well known that greater quantities are produced at the Cyclops Works than at any other house in the kingdom, while in the articles of springs it is equally certain that that establishment ranks first in the world in the extent of its productions; besides which, it stands amongst the foremost in the manufacture of steel. These facts sufficiently account for the great breadth of space assigned to Messrs. JOHNSON, CAMMELL, & Co. in the locality in which they exhibit."

EXTRACT FROM "THE WORLD IN ITS WORKSHOPS."

"WE now turn more immediately to the steel articles in the exhibition of British manufactures, many of them making an effective display. The most interesting contributions in this class are from the far-famed Cyclops Steel Works, Sheffield, the manufactory of Messrs. JOHNSON, CAMMELL, & Co., which enterprising firm were the inventors of the celebrated Patent Elastic Cast-steel Railway and other Springs, and, by their skilful manipulation of the metal, have vastly enlarged the consumption and improved the general quality and manufacture of steel. Here we have specimens of the different processes of making steel from the raw iron as imported from Sweden and Russia up to the most refined state of the metal, and, also, of manufactured articles in which the best quality of steel is an indispensable requisite. Follow that piece of iron through all its various stages, carbonized, converted, melted, and refined, until it terminates in one of the laminæ of those highly-finished carriage-springs, and you have a lesson in manufacturing art, few of which can be more useful or instructive. Then let your mind range over the fabrication of the metal—in the foreign department for instance—and trace in imagination the progressive stages of a similar piece of the raw material in the foundries of those countries described in a preceding page, and you will instantly recognise the cause of our superiority in the manufacture of steel: indeed the foreign metal in its most finished state is scarcely worth the name of steel, not having passed through the cementing ordeal to which it is subjected in England. The steel of Messrs. JOHNSON, CAMMELL, & Co., has acquired a high name for its superior quality, whether it be in the condition of

'cemented blister,' 'double sheer,' elastic spring, or double refined cast steel, all of which enter largely into the purposes of manufacture. In locomotive mechanical aids, such as springs, files, steel, &c. &c., Messrs. JOHNSON, CAMMELL, & Co. make a most interesting and important display; the 'curvilinear tanged file,' for instance, being a grand improvement upon the common form of that tool; so, also, the continuous tooth concave and convex file, which received the well-merited recognition of a medal from the Society of Arts. The steel, engineering, and machinists' files of Messrs. JOHNSON, CAMMELL, & Co., are used solely in Her Majesty's dockyards, the Honourable East India Company's workshops, and most of the public and private engineering establishments in this and other countries; and, from the great estimation in which they are held, bid fair to supersede all others. In mentioning one firm of real practical eminence, we mention, as it were, all that come within the range of their peculiar class of manufacture; therefore, by way of limiting our labours, we shall direct attention to the files of Messrs. JOHNSON, CAMMELL, & Co., whose careful finish will be immediately recognised; to their springs for railway carriages; and, above all, to their piston rod, weighing 16 cwt., the finest and largest piece of steel in the Exhibition. This rod is of cast steel, and has passed through the several processes of manufacture already enumerated, and, as regards its working qualities, it is fair to assume that they are very far more efficient than those of the ordinary pistons, which are generally made of greatly inferior metal."

OXFORD lies in the road to BATH, BRISTOL, CLIFTON, and the WEST OF ENGLAND; also to STRATFORD-ON-AVON, LEAMINGTON, WARWICK, KENILWORTH, BIRMINGHAM, and the NORTH; to CHELTENHAM, GLOUCESTER, and SOUTH WALES. In its immediate neighbourhood are BLENHEIM, NUNEHAM, and other places of interest.

Visitors to Oxford, one hour and twenty minutes from London, are invited to inspect

SPIERS & SON'S ESTABLISHMENT,
