Die Plattform e-rara.ch macht die in Schweizer Bibliotheken vorhandenen Drucke online verfügbar. Das Spektrum reicht von Büchern über Karten bis zu illustrierten Materialien - von den Anfängen des Buchdrucks bis ins 20. Jahrhundert.

e-rara.ch provides online access to rare books available in Swiss libraries. The holdings extend from books and maps to illustrated material - from the beginnings of printing to the 20th century.

e-rara.ch met en ligne des reproductions numériques d'imprimés conservés dans les bibliothèques de Suisse. L'éventail va des livres aux documents iconographiques en passant par les cartes - des débuts de l'imprimerie jusqu'au 20e siècle.

e-rara.ch mette a disposizione in rete le edizioni antiche conservate nelle biblioteche svizzere. La collezione comprende libri, carte geografiche e materiale illustrato che risalgono agli inizi della tipografia fino ad arrivare al XX secolo.

NOTE XVII.SYNONYMICAL REMARKS
ABOUT DICHROSOMA LANSBERGEI, KRTZ.

BY

J. R. H. NEERVOORT van de POLL.

In a paper on the Cetoniidae captured by Mr. C. Ribbe in the Aru-Islands (Deutsche Entomologische Zeitschrift. XXIX (1885). p. 81—93), Dr. Kraatz has established the genus »*Dichrosoma*” for the reception of an insect upon which he bestowed the specific name »*Lansbergei*.” According to the author this new genus is a very distinct one, although rather difficult to characterize, being not closely allied to any of the already known genera, and perhaps it should be best placed after *Sternoplus*.

Having acquired of late the unique specimen (*type*) of this species, I was at first sight surprised by the great resemblance it shows in outline with *Diaphonia Bassi* White, an insect upon which Kraatz has established his genus *Platedelosis* (Deutsche Ent. Zeitschrift XXIV (1880). p. 198), and after a careful examination of both the species, I feel quite sure that there is not a single characteristic to justify a generic separation. Happily I remembered the existence of a *Platedelosis*-species from New-Guinea, viz.: *Pl. pinguis* O. Jans. (Cist. Ent. II. p. 605 (1882). pl. XI, f. 2), and a careful comparison of *Pl. Lansbergei* with the description and figure of *Pl. pinguis* convinced me that it is quite the same species, the coloration only being somewhat different,

Notes from the Leyden Museum, Vol. IX.

175

viz.: the black of the thorax is much reduced, the sides being broadly edged with yellow, the black oblique median spots on the elytra are larger and touch the outermargin, and there is an additional black spot at the shoulders and a narrow black stripe along the greater apical portion of the suture, the abdomen is entirely black, and also the greater part of the legs.

Pl. pinguis seems to be widely distributed, as Mr. Janson told me some time ago, that he had seen a specimen from Northern Australia.
